## Shafts and sand traps

Argonomy of shafts and sand traps:  
because only systematic cleaning  
is proper cleaning

ARGO d.o.o. is a Slovenian company established in 1990. We deal with manufacturing and trade activities. Initially it was engaged in designing and production of specialised nautical equipment, deck equipment of vessels for recreational and competitive sailing. Today the sailing boat production represents 5% of the whole production.

In 1991 we added a programme of house sewage systems to the nautical programme. The programme of the production of pipes and polypropylene fittings has successfully expanded and soon surpassed the nautical programme. Today it represents as much as 70% of the production. Argo is a manufacturer of sanitary plastic products with the most wide-ranging programme in the country. The quality of our products is second to none in Slovenia and we are also successfully proving our worth in the markets of Western and Eastern Europe.

In 2001 we launched the third programme: the programme of polyethylene cable ducts which currently represents 25% of our production.

We are operating on an area of 17,000 m<sup>2</sup>, 4,000 m<sup>2</sup> of those are covered.

Yearly we produce approximately 1,000 tons of polyethylene and 3,000 tons of polypropylene. We also offer our clients a comprehensive programme of pipe systems including pipes and fittings for house sewage systems, street sewage systems, drainage, plumbing etc.

Despite the fact that we are already successful in our activities we do not intend to rest. We are expanding, complementing and improving our offer. So it is no coincidence that we named our company Argo. In mythology Argo was the name of Jason's ship that carried the fearless and daring sailors into the unknown world to find the Golden Fleece. Daring, boldness and the desire to make new discoveries is the entrepreneurial spirit of the Argonauts that also pervades our company. This is why we constantly expand and upgrade our manufacturing capacities, invest in professional training, follow the world trends and develop innovative solutions.

All this enables us to reach our most important goal: the satisfaction of our customers. We strive to offer our every client not just products of high quality but also solutions that are tailored for the client's specific needs and wishes. Following this mission is also the best guarantee for an even greater success on the broader European market, including Slovenia.

## Details that matter

The performance of complex systems mostly depends on how professionally, deliberately and accurately the details have been tackled. Shafts and sand traps play an important role in partial and full systems; this is why we recommend that you choose only quality, modern and optimal solutions.

## Shafts

Argo shafts are made of polypropylene. They excel with exceptional resistance to extreme temperatures. They come with ready to use apertures for various pipe sizes. Shafts can be installed for collecting rain water. A barrier can be installed inside the shaft. A cover or a grating can be fixed on the top part of the shaft.

## Sand traps

Argo sand traps are small, light and made entirely of polypropylene. They can be installed for collecting rain water. Inside the box structure there is a barrier that prevents sand, leaves and similar objects escaping to the canal which would cause pipe clogging. The sand traps are long-lasting and resistant to temperature changes.

## Drain shaft

Argo drain shafts are made of polypropylene. They are usually installed in front of garages or around pools. Drain shafts are intended for collecting rain water and to prevent water pour into a garage, road etc.
