

Duct casting

Argonomy of duct casting:
because you need the right gateway
between the inside and the outside

Argonomy of Connections

ARGO d.o.o. is a Slovenian company established in 1990. We deal with manufacturing and trade activities. Initially it was engaged in designing and production of specialised nautical equipment, deck equipment of vessels for recreational and competitive sailing. Today the sailing boat production represents 5% of the whole production.

In 1991 we added a programme of house sewage systems to the nautical programme. The programme of the production of pipes and polypropylene fittings has successfully expanded and soon surpassed the nautical programme. Today it represents as much as 70% of the production. Argo is a manufacturer of sanitary plastic products with the most wide-ranging programme in the country. The quality of our products is second to none in Slovenia and we are also successfully proving our worth in the markets of Western and Eastern Europe.

In 2001 we launched the third programme: the programme of polyethylene cable ducts which currently represents 25% of our production.

We are operating on an area of 17,000 m², 4,000 m² of those are covered.

Yearly we produce approximately 1,000 tons of polyethylene and 3,000 tons of polypropylene. We also offer our clients a comprehensive programme of pipe systems including pipes and fittings for house sewage systems, street sewage systems, drainage, plumbing etc.

Despite the fact that we are already successful in our activities we do not intend to rest. We are expanding, complementing and improving our offer. So it is no coincidence that we named our company Argo. In mythology Argo was the name of Jason's ship that carried the fearless and daring sailors into the unknown world to find the Golden Fleece. Daring, boldness and the desire to make new discoveries is the entrepreneurial spirit of the Argonauts that also pervades our company. This is why we constantly expand and upgrade our manufacturing capacities, invest in professional training, follow the world trends and develop innovative solutions.

All this enables us to reach our most important goal: the satisfaction of our customers. We strive to offer our every client not just products of high quality but also solutions that are tailored for the client's specific needs and wishes. Following this mission is also the best guarantee for an even greater success on the broader European market, including Slovenia.

Advanced solutions

The products belonging to the duct castings can be used on bicycle tracks, walkways, parking spaces for cars and cargo vehicles, road surfaces – everywhere where there is a need for a reliable, quality and long-term solutions for connection between the “outside and the underground”. The technology has of course made a step forward even in the area of duct castings, that is why meeting only the traditional needs of duct castings is outdated. With our products we offer you a reliable and modern solutions with a lifetime guarantee.

The advantages of our products

- transport, installation and maintenance of duct casting products are simple
- because of the material used (ductile cast iron) our products are 10 to 50% lighter than grey cast iron products while the load-bearing capacity is the same
- under load the products are stable and fixed in their place which means there is no more bothersome noise
- because of the improved shape of the frame our products stick firmly to the base
- the corrosion inhibitor used is black paint
- the products can be fitted with an anti-noise insert, bolt, air apertures; you can choose between different inscriptions, crests etc.
- the products meet the requirements of the SIS EN 124 standard

03 Duct covers and grating

Legend for installing duct covers and gratings

- CLASS A: A 15 LOAD-BEARING CAPACITY > 15 kN
Pedestrian areas, bicycle tracks and green plots.
- CLASS B: B 125 LOAD-BEARING CAPACITY > 125 kN
Pedestrian areas, bicycle tracks, pavements and parking spaces for cars.
- CLASS C: C 250 LOAD-BEARING CAPACITY > 250 kN
Roads, streets, parking spaces for cars and parking spaces with light cargo vehicle traffic.
- CLASS D: D 400 LOAD-BEARING CAPACITY > 400 kN
Roads, streets, verges and parking spaces with heavy cargo vehicle traffic.
